ABOUT ME

I come from a background in Biomedical Science, Dentistry, Neuroscience, Neuropsychology, and now Software Engineering. I have taken on many challenging fields in my life, I have excelled in each one. I wasn't sure how I would do in Computer Science, but the moment I started thinking of computer processes the same way I do about neurochemical processes, it all began to make sense, and I was able to take front-end, back-end, local storage, session storage, database development, database connectivity, and a complete website deployment with domain routing before finishing IT fundamentals.

UAB refers to The University of Alabama at Birmingham
